

# 11

## Twitter

### New Skills

1. Use the Find and Replace command.

### Activity Overview

**T**witter, a real-time information network, is the best way to discover what's new in your world. "Tweets" are small bursts of information, comparable to a newspaper headline, that provide additional information on a topic of interest to you in the rich details pane. You don't have to tweet to enjoy Twitter; you can just listen in and get the latest information on what interests you.

The following activity illustrates how a database can be used to hold data about the most followed people on Twitter and how to use the Find and Replace command to change information on that list.

### Instructions

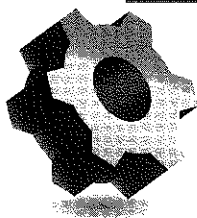

1. Create a NEW database.
2. Name the database TWITTER.
3. Create a NEW table in Design View.
4. Set up the database table by using the database structure provided below.

#### Database Structure

FIELD NAME	DATA TYPE
Name	Text
Screen Name	Text
Number of Followers	Number (Format to Standard Format and 0 Decimal Places)
Joined	Text

5. Save the table as MOST FOLLOWED TWITTERHOLICS without defining a primary key.
6. Go to Datasheet View and enter the data for each record as shown.
7. Adjust the Field Name column widths as necessary.
8. Resave the table.
9. Carefully proofread your work for accuracy.
10. Print a copy of the MOST FOLLOWED TWITTERHOLICS table if required by your instructor.
11. Use the Find and Replace command to find all Twitterholics who joined 24 months ago and replace 24 months ago with two years ago.
12. Print a new copy of the MOST FOLLOWED TWITTERHOLICS table if required by your instructor.
13. Do not save the changes to the design of the MOST FOLLOWED TWITTERHOLICS table.

**NEW SKILL**

Twitter
